

Pilot Flight Deck Assessment

When you visit your optician it is important for them to have various focal measurements so that they can best calculate your prescription. Inside the flight deck there are instruments at different distances so take a note of the following key measurements and take them with you when you have your next eye test. Take measurements in centimetres.

Make sure your optician specifies Bigatmo lenses to benefit from our advanced, flight tested, technology.

A _____

D _____

B _____

E _____

C _____

F _____
